

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

CHINA COOPERATIVE AGREEMENTS

Dr. Hanibal C. Tayeh, President/CEO and Laboratory Director along with Dr. M. Amine Dahmani, Research and Development Section Team Leader of Spectrum Analytical, Inc. successfully completed a trip to China in support of Spectrum's international business strategy. As a result of this trip, Spectrum signed cooperative agreements with the Chinese Research Academy of Environmental Sciences (Key Laboratory for Ecological Effects & Risk Estimation of Chemicals (China EPA, SEPA)) in Beijing; with the Environmental Monitoring Center of the Jiangsu Province in Nanjing and with the Dalian Environmental Monitoring Center. Under the terms of these agreements, Spectrum will serve as a support laboratory to these institutions for organic, inorganic, wet chemistry and microbiological testing. All Spectrum support analyses will be conducted in accordance with US Environmental Protection Agency methodologies following the stringent criteria set forth in conjunction with NELAC. The cooperation will allow American and other companies operating in China to send samples to Spectrum through these partner institutions. Data produced by Spectrum would be certified by the partner institutions in China. In turn, analyses that can be conducted by our Chinese partners may be done as by such and would be validated by Spectrum Analytical. The cooperative will also allow for the joint pursuit of projects in China that may involve other partners such as American consulting firms. Spectrum may refer consulting firms who have a presence in China and request from us environmental analytical support to our partner institutions.

On-site training for our Chinese visitors at Spectrum and technical support for our partners (analytical, site assessment and remediation) is also included as part of this cooperative. A training model recently developed at Spectrum will be used. The training will be tailored to the needs of our partner institutions. Topics may include, but is not limited to, overall sample management, sample introduction, sample preparation, sample analyses, quality assurance/quality control, data validation, instrument operation, instrument troubleshooting, health and safety, and general quality assurance requirements. Special topics may also be provided on field sampling techniques, field analytical techniques, site assessment and remediation. The special training topics may involve some of our environmental consultant clients in the U.S. Spectrum Analytical is developing short courses in environmental analytical chemistry, site assessment and remediation with Professor. Leping Zheng of the School of the Environment and Chemical Engineering at Shanghai University.
